Client Communication: One-on-One Stakeholder Conversations

Oct 15, 2026 · @Tayyaba

Overview

These six conversations show how NexaBridge Consulting talks one-on-one with Al-Hamra's stakeholders, and how they talk back. Each person has a different concern, so we adapt our style while keeping the same professional tone. Dates, numbers and names match the proposal, emails and WhatsApp chats. Names are sample (fictional) ones.

#	Date	Mode	People	Topic
1	Fri 9 Oct 2026	Phone call	Ayesha Khan, Adeel Hamid (CEO)	Understanding needs and budget
2	Wed 21 Oct 2026	In-person meeting	Ayesha Khan, Sana Iqbal (Finance Head)	Costing details
3	Thu 12 Nov 2026	In-person	Ayesha Khan, Kashif Mehmood (Sales Head)	Fear of staff resistance
4	Mon 18 Jan 2027	Video call	Hamza Sheikh, Faisal Raza (IT contact)	Internet, power cuts, user access
5	Wed 24 Feb 2027	In-person, after training	Zain Abbas, Hina Farooq (Sales super-user)	Practical difficulties in using the system
6	Fri 30 Apr 2027	In-person	Ayesha Khan, Adeel Hamid (CEO)	Final review and next steps

How we communicate

- **Listen first.** We let the person explain, then repeat their concern back in our own words.
- **Use plain words.** No technical terms unless the person uses them first.
- **Match the person.** Short and decision-focused with the CEO, number-focused with Finance, practical with users.
- **End with a next step.** Every conversation ends with who does what by when, confirmed by email afterwards.

Conversation 1: Introductory Call with the CEO

Friday, 9 October 2026, phone call, about 30 minutes. Ayesha Khan (NexaBridge) and Adeel Hamid (CEO, Al-Hamra).

Ayesha: Good morning, Mr. Hamid. Thank you for your time. May I start by asking what is the biggest problem you want to solve?

Adeel: Good morning, Ayesha. Honestly, I do not know my real stock. Orders come on WhatsApp, stock is in Excel, and my team needs three or four days to prepare one report.

Ayesha: So the main problems are orders that can be missed, stock figures you cannot trust, and slow reports. Have I understood correctly?

Adeel: Yes, exactly. And I do not want a project that never ends.

Ayesha: That is a fair concern. We work in five phases over six months, and you approve each phase before the next one starts. How many people would use the system?

Adeel: About 25, across three warehouses.

Ayesha: Thank you. May I ask what budget you have in mind, so I can suggest something realistic?

Adeel: Somewhere around 40 to 50 lakh, but I want to see what is included.

Ayesha: Understood. I will send a written bid on Tuesday, with the scope, timeline and price. The full proposal will follow on Thursday. Does that work for you?

Adeel: Yes, please send it. Thank you.

Ayesha: Thank you, Mr. Hamid. I will confirm today's points by email this afternoon.

What this shows: the consultant asks open questions, repeats the problem back, answers the fear of a long project with phases and approvals, and ends with dates.

Conversation 2: Costing Discussion with the Finance Head

Wednesday, 21 October 2026, 11:00 AM to 12:00 noon, Al-Hamra office, Lahore. Ayesha Khan and Sana Iqbal (Finance Head).

Sana: Ayesha, thank you for coming. The total of PKR 4,395,000 is large for us. Please explain it.

Ayesha: Of course. PKR 2,900,000 is our consulting fee for four specialists, charged by the months they work on your project. PKR 1,200,000 is software licences, which we pass on at our cost. Training is PKR 150,000, and PKR 145,000 is a contingency fund.

Sana: What is the contingency for?

Ayesha: It covers unexpected small items, for example an extra training session. We use it only with your written approval, and whatever is unused is deducted from our final invoice.

Sana: Are taxes included?

Ayesha: No. The amounts are before applicable taxes, and the invoices will show them separately.

Sana: Can we reduce the cost?

Ayesha: Yes. With 20 users instead of 25, the total becomes PKR 4,155,000. But your three warehouses need access, so I would recommend keeping 25 users from the start.

Sana: That is true. We will keep 25. How will payments work?

Ayesha: Five milestones: 20% on signing, 20% at design sign-off, 30% when data migration is complete, 20% at go-live and 10% at final handover. You pay each time only after you approve the milestone.

Sana: That is acceptable. I will recommend the proposal to Mr. Hamid.

Ayesha: Thank you, Ms. Iqbal. I will send you a summary by email today.

What this shows: the consultant answers every cost line openly, gives an honest recommendation instead of simply selling the cheaper option, and links payments to approvals.

Conversation 3: Sales Head Worried About Staff Resistance

Thursday, 12 November 2026, in person, about 20 minutes. Ayesha Khan and Kashif Mehmood (Sales Head).

Kashif: Ayesha, to be frank, my team has used Excel and WhatsApp for years. They will not like a new system.

Ayesha: Thank you for saying so openly, Mr. Mehmood. What exactly worries you?

Kashif: Two things. They may think it is extra work, and they may make mistakes in front of customers.

Ayesha: Both are normal worries. Here is what we plan. First, one person from your team becomes a super-user, who learns early and helps the others. Second, training uses your real orders, so it feels familiar. Third, for the first four weeks after go-live, our team stays beside your staff.

Kashif: And if someone struggles?

Ayesha: We note it, give a short extra session and check again within a week. Nobody is left alone.

Kashif: What do my people gain from it?

Ayesha: No double entry, no searching for old WhatsApp messages, and quick customer balances in a few clicks. I will show your team this in the training.

Kashif: Fine. Let me discuss the super-user with my team. I will give the name to Bilal.

Ayesha: Thank you. I will note it in the minutes and follow up with Bilal on Monday.

What this shows: the consultant welcomes a difficult concern, responds with specific actions instead of promises, and turns resistance into a role for the Sales team.

Conversation 4: IT Contact on Internet, Power Cuts and Access

Monday, 18 January 2027, video call, about 25 minutes. Hamza Sheikh (ERP Functional Consultant, NexaBridge) and Faisal Raza (IT contact, Al-Hamra).

Faisal: Hamza, my main worry is the internet. If it goes down, can the warehouses still work?

Hamza: A good question. The system is cloud-based, so it needs internet. I recommend a second internet connection at each warehouse and a UPS (battery backup) for the computers and router.

Faisal: Is the data safe?

Hamza: Yes. Data is backed up by the software provider, and each user gets their own login with access only to what they need. Nobody can change records without leaving a trace.

Faisal: Who creates the user accounts?

Hamza: We prepare the list of 25 users with their roles, you approve it, and we create the accounts. After handover, you manage new users.

Faisal: Can you send me the minimum computer and internet requirements?

Hamza: Certainly. I will email a one-page checklist today. Could you confirm by Friday, 22 January, whether each warehouse meets it?

Faisal: Yes, I will check all three sites and reply by Friday.

Hamza: Thank you, Faisal. I will also copy Bilal on the email.

What this shows: the consultant answers a technical person in technical terms, gives clear recommendations, and sets a deadline for the client's own action.

Conversation 5: Sales Super-User After Training

Wednesday, 24 February 2027, after the Sales training session, about 15 minutes. Zain Abbas (Trainer, NexaBridge) and Hina Farooq (Sales super-user, Al-Hamra).

Zain: Hina, thank you for staying back. How did the session feel to you?

Hina: It was useful, but I am still confused about entering customer discounts. I am afraid of making a mistake.

Zain: Thank you for telling me. Many people find that step difficult. Let us do one order together, right now, with a real discount.

Hina: Yes, please.

Zain: First, open the order and select the customer. Now you add the item, and the discount goes in this box. The system shows you the final price before you confirm. Would you like to try the next one yourself?

Hina: Yes. Oh, that was easier than I thought.

Zain: Well done. What would help you most when you are alone with a customer?

Hina: A one-page cheat sheet with the steps.

Zain: A good idea. I will prepare it for the whole Sales team and send it to you by Friday, 26 February.

Hina: Thank you, Zain. I will practise tomorrow with my team.

What this shows: the trainer encourages honest questions, practises on a real case, and turns the user's suggestion into a deliverable with a date.

Conversation 6: Final Review with the CEO

Friday, 30 April 2027, after the handover meeting, about 15 minutes. Ayesha Khan and Adeel Hamid (CEO).

Ayesha: Mr. Hamid, thank you for your support over these 26 weeks. May I share where we are against your goals?

Adeel: Please do.

Ayesha: All 25 users are trained and working in the system. Every sales order, purchase and invoice is now entered in it. Reports that took three or four days now take about ten minutes. And at the last stock count, accuracy was 98.7%, above the 98% target.

Adeel: That is a big change. My team no longer calls me about stock.

Ayesha: I am glad. Is there anything we should have done better?

Adeel: The data cleaning took more effort from my staff than I expected. Otherwise, I am satisfied.

Ayesha: Thank you for that feedback. In future projects we will start data cleaning even earlier. What are your plans after today?

Adeel: I would like some support for the next few months. Please send me a short written offer.

Ayesha: Certainly. Our optional support plan is PKR 100,000 per month. I will email the offer by Monday, 3 May, so you can decide at your own pace.

Adeel: Thank you, Ayesha. We will be happy to recommend you.

What this shows: the consultant reports results in the client's own goals, asks for honest feedback, accepts criticism calmly, and closes with one clear next step.

Quality Check

The six conversations follow the same principles. Dates, weekdays and amounts were checked against the proposal and the other documents.

Principle	How it shows in the conversations
Open and respectful greeting	Each starts with thanks and a clear purpose
Active listening	The consultant repeats the concern before answering
Honest advice	Recommends 25 users over a cheaper option, and accepts criticism
Plain language	Technical words only with the IT contact
Clear next step	Every conversation ends with who does what and by when
Written follow-up	Each point is confirmed by email afterwards
Equal tone for all levels	The CEO, the Finance Head and a super-user are all treated with the same respect
